Introduction

Welcome to Soweto Global Solutions!

We are thrilled to have you join our regional support network. As an entry-level Software Support Specialist. While our organization spans various time zones, cultures and languages, the common factor which connects our global workforce is the suite of tools we use to communicate and document our progress.

Purpose

The purpose of this guide is to equip you with the foundational technical knowledge and communication skills needed to provide excellent support to our diverse user base. This guide serves as your primary reference for troubleshooting scenario and keeping up the high documentation standards. As you navigate your first few weeks, use this guide to familiarize yourself with all the functions and aspects of the software we utilize on a daily basis.

We are committed to fostering an inclusive and respectable workplace. You are joining a collaborative workplace where no question is too small. By mastering these basics, you ensure that our regional workplaces remain professional and efficient. Let's get started!

Module 1: Microsoft Word Basics.

What is Microsoft Word?

Microsoft word is a feature packed word processing program. It is available on a diverse number of platforms including Windows, macOS, mobile devices and in website form. It is an app which allows you to create, format and edit documents whilst also allowing the possibility of collaboration. Everything from letters, resumes, research and report papers can be done on Word.

Creating and formatting a Professional document:

Objective: To produce a professional and standardized document that adheres to Soweto Global Solutions cooperate identity.

Steps:

1. Open the word application and select "File" → "New".

2. Search for "Soweto Global Solution" template (if unavailable, select "Blank Document)"

3. Immediately save the document by clicking "Ctrl + S". Save the document in the following format:

   YYYY – MM – DD_ProjectName_Draft.

4. Make sure the formatting of the document is correct. If there are any errors refer to (Microsoft Word Application Troubleshooting – pg. 6).

5. Export as pdf for regional distribution, “File” → “Export” → “PDF/XPS”.

Note: This guide may be accessed in different languages by clicking “Review” → “Language” and “Translate”.

注意：可以通过点击“审阅”“语言”和“翻译”以不同语言访问本指南。

ملاحظة: يمكن الوصول إلى هذا الدليل بلغات مختلفة بالنقر على “مراجعة” و “ترجمة” “اللغة”.

Remarque : Ce guide peut être consulté dans différentes langues en cliquant sur « Révision » « Langue » et « Traduire ».

Module 2: Technical knowledge- Application 1 support

Based on standard Microsoft Windows Utilities (2024)

Figure 1 - illustrative diagram of Official Microsoft Word Application Icon.

2.1) Microsoft Word: Troubleshooting

Most Word issues are not "bugs" but rather user-face confusion or hidden formatting conflicts. Use the following to resolve the most common queries:

1. The "locked document" issue

Scenario: The user states they cannot type in their document, or most ribbon features are grayed out.

Figure 2 - Microsoft Word Ribbon showing (grayed-out) command icons. Based on standard Microsoft Word Application (2021) which occurs when the document is opened in read only or the Microsoft Office 365 Subscription has ended

Common cause: The document is opened in "Read-only" mode, or the user is viewing a "Protected View" document from Outlook.

Step by step solution:

1. Look for a yellow bar on top of the document. Click "Enable Editing".

2. If no bar exists, go to "File" → "Info" → "Protect Document" and check if "Restricted Editing" is enabled.
   Note: a document cannot be edited if an external author has made "restricted editing" enabled.

3. Check if Microsoft 365 is activated. If the subscription has ended, Word enters "Reduced Functionality Mode." In order to access editing the document, the subscription need to be renewed.

2. Document Recovery

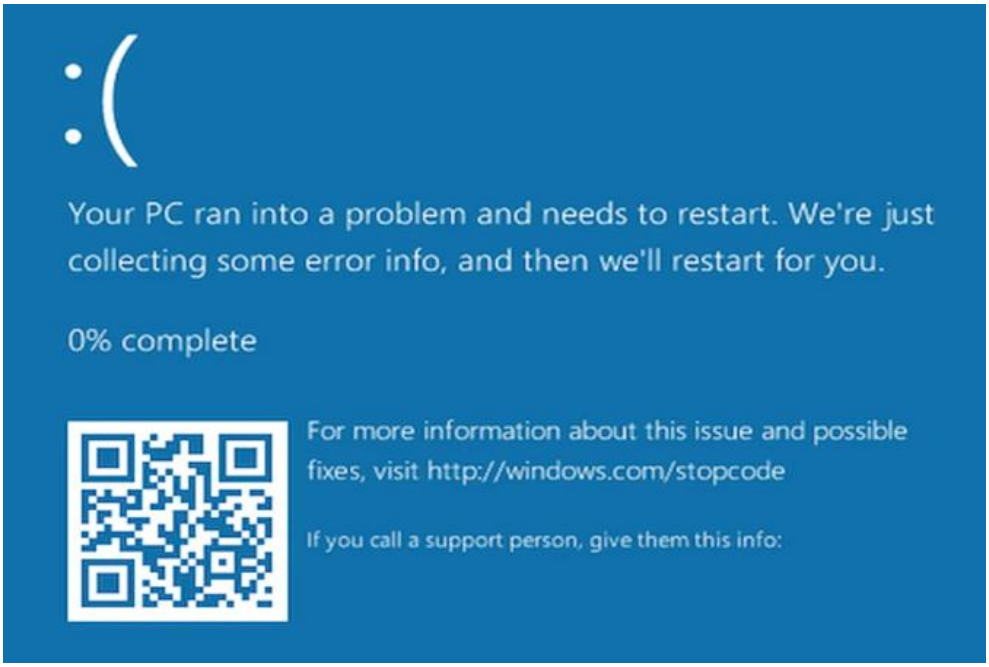

Figure 3 - Visual indicator of a system-level critical error, indicating a hardware or OS failure. Which occurs when the internal drivers of the computer crash.

Scenario: The computer has crashed and it is believed that hours of work has been lost.

Step by step solution:

1. *Open Word and go to "File" → "Open.*

2. Scroll to the bottom of the “Recent” list and click “Recover Unsaved Documents”.
3. Look for the most recent file and click “Open”, then immediately “Save As” to a secure location on the computing device.

3. Page breaks

Scenario: There are unwanted gaps of empty space in the document which cannot be deleted or, a new section is starting halfway down the page instead of at the top.

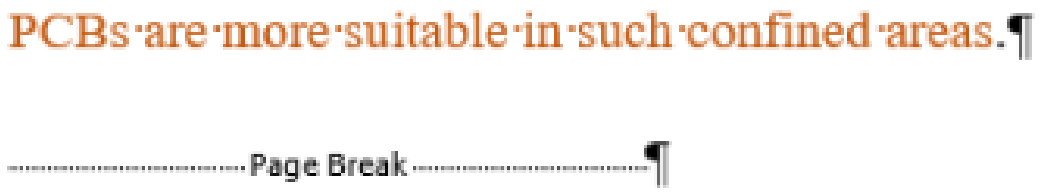

Figure 4 - Visual representation of a Page Break separating a documents content. Based on standard Microsoft Word Application (2021)

Common cause: Manually inserted page breaks or section breaks that have become hidden within the paragraphs

Step by step solution:

1. Turn on “Formatting marks”. Go to the “Home” tab and click the “ ¶ ” icon to show the paragraph marks.

2. Identify the dotted line labeled “Page break”.

3. Place the cursor at the beginning of the dotted lines and press the “delete” key on your keyboard.

4. If there are no dotted lines and the page still has a gap, and the text moves on to the next page. Right click the paragraph that is still jumping and select “Paragraph”. Go to “Line and breaks tab” and uncheck “Page break before”.

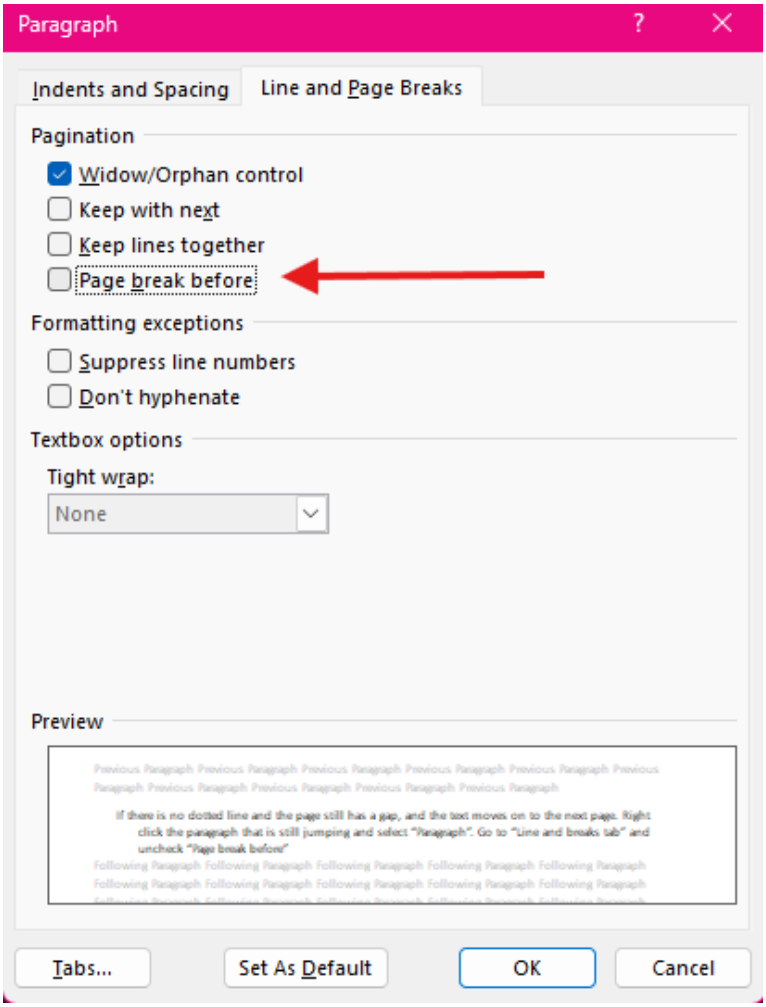

Figure 5 - Visual representation of Line and Breaks tab. This is obtained when the user selects the text and right clicks it then goes to Paragraph and thereafter to Line and Break tab. Then the user unchecks Page Break Before. Based on standard Microsoft Word Application (2021)

4. Fixing Alignment

Scenario: The spacebar is used repeatedly to align text which results in the documents layout breaking and looking different when viewed on different screens or when printed.

Step by Step solution:

1. Highlight the text.

2. On the “Home” tab, right-click any style in the “Styles Gallery”.

Figure 6 - Visual representation of Styles Gallery found in the Home Tab. Based on standard Microsoft Word Application (2021)

3. Select “Update ”

5. Font size discrepancies

Scenario: The document is messy due to the fact some paragraphs are in Ariel 12pt, while others are in Calibri(Body) 16pt, and the line spacing is uneven throughout the document

Solution:

1. Press “ctrl + A” to highlight the entire document and press “ctrl + spacebar”. This will strip away all manual font changes and automatically return it to the documents default font.

2. If only a small section of the document is wrong, then click “Format Painter” on the “Home” tab. Then paint over the incorrect text to adjust the font, size and color.

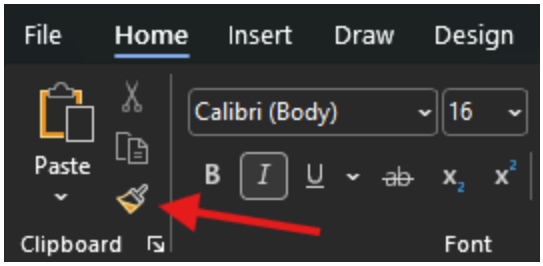

Figure 7 - Visual representation of the Home tab with a clear indication of where the Format Painter function is Based on standard Microsoft Word Application (2021)

Note: In the future when pasting (after copying the text from a source), right-click on the clipboard icon and select the “Keep Text Only” icon (the letter ‘A’ on the clipboard)

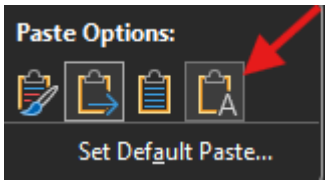

Figure 8 - A visual of the clipboard icon which appears once a user pastes information. Based on standard Microsoft Word Application (2021)

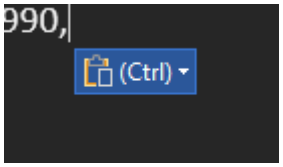

Figure 9 A visual of the icon which represents the Keep Text Only Function when copy and pasting. Based on standard Microsoft Word Application (2021)

6. Image Shifting or overlapping text

Scenario: A picture is trying to be moved on the document but it snaps to the wrong place or hides the texts behind it.

Step by Step Solution:

1. Click the image. A small “Layout Options” icon will appear near the top-right of the photo.

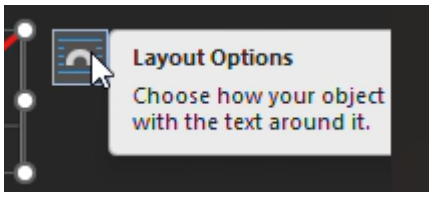

Figure 10 - A clear visual indication of what the Layout Option icon looks like when clicking the image. Based on standard Microsoft Word Application (2021)

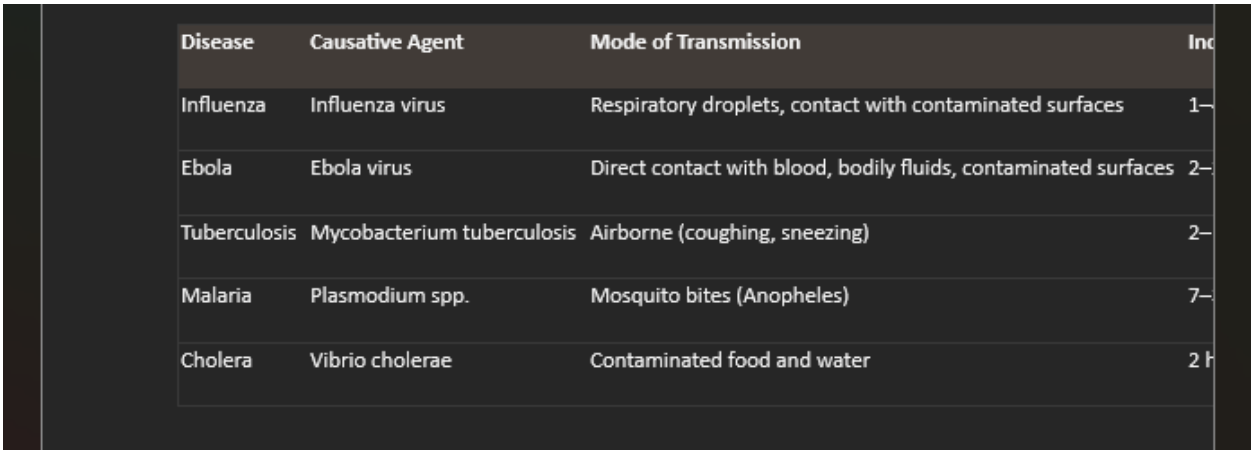

2. Select “Square” or “Tight” for the text to wrap neatly around the image.

3. If you would like the image to move freely, select “In Front of Text”.

Note/Tip: Use the “Fix position on page” found in the same Layout Option feature in order to prevent the image from moving when text is typed above it.

7. Table columns disappearing of page

Scenario: A table has been pasted from a website or another document, and the right side of the table is cut off. The cut off part of the table is invisible on the right margin.

Disease	Causative Agent	Mode of Transmission	Inc
Influenza	Influenza virus	Respiratory droplets, contact with contaminated surfaces	1–
Ebola	Ebola virus	Direct contact with blood, bodily fluids, contaminated surfaces	2–
Tuberculosis	Mycobacterium tuberculosis	Airborne (coughing, sneezing)	2–
Malaria	Plasmodium spp.	Mosquito bites (Anopheles)	7–
Cholera	Vibrio cholerae	Contaminated food and water	2 h

Figure 11 - A Visual representation of a tables content being cut off on the right margin of the page. Based on standard Microsoft Word Application (2021)

Step by Step Solution:

1. *Right click anywhere inside the table.*

2. Go to the “Table Layout” tab (the one which pops up onto the ribbon once you right click the table).

3. In the “Cell Size” group , click the “AutoFit” button.

4. Click the “AutoFit Window”. The table will automatically shrink to fit perfectly within the page margins.

8. Slow performance in large documents

Scenario: Word lags, freezes or takes a long time to scroll in a document with 40+ pages.

The cause: High resolution images or excessive background spell checking causes the document to slow down by a noticeable amount.

Solution:

1. Click any image. Go to the “Picture format” tab seen on the right side of the ribbon once the picture is clicked. Then to “Compress Pictures” → “Apply to all pictures in this file”

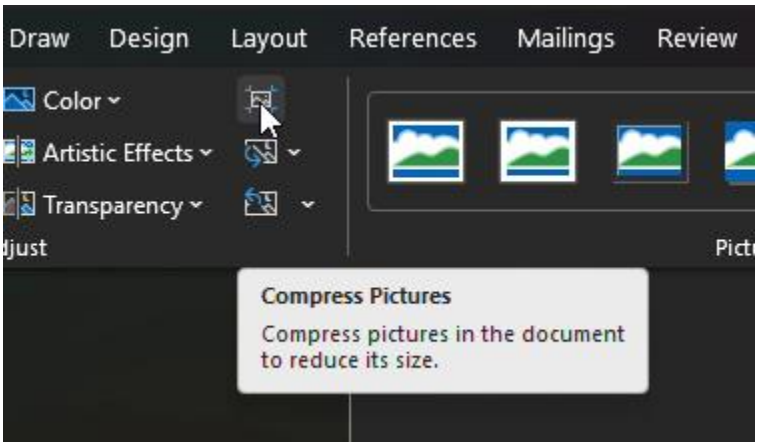

Figure 12 - A clear visual indication of the Compress Picture feature icon. Which is obtained by going to the Picture Format tab seen on the right of the screen then going to Compress Pictures. Based on standard Microsoft Word Application (2021)

2. *Click “View” on the ribbon. Select “Draft”. This removes the print layout and allows for the document to be edited faster.*

3. *Go to "File" → "Options" → "Proofing" and uncheck "Check spelling as you type". Once the document is completely edited, put the setting back on in order to proof check your work.*

2.2) Microsoft Word: Shortcuts

Note: Some of the following shortcuts can be used in other applications.

Figure 13 - Visual representation of a standard keyboard highlighting the keys to press for a Ctrl + C shortcut.

Action:	Shortcut:	Function:
Copies Selected Text	Ctrl + C	Used to copy text images and tables, without removing it from the original place.
Pastes Selected Text	Ctrl + V	Places copied text, images or table onto the document. *Note: if the formatting does not look right? Press ctrl again and see the "paste options" menu. Click the one which applies.*

Undo Last Action	Ctrl + Z	Used to reverse/undo last action such as an accidental deletion of an image, or formatting errors.
Find and replace	Ctrl + H	Searches a document for a specific error and you are given the option to replace that error with the corrected version. Used mainly for correcting typos and removing page breaks.
Clear all formatting	Ctrl + Spacebar	Fixes all mismatched fonts or font sizes which is a result from pasting information from the web.
Insert a hyperlink (e.g. Website link)	Ctrl + K	The way to link a website or a regional SharePoint.
Select all content	Ctrl + A	Used to select all text in a document in order for formatting.
Creates a new document	Ctrl + N	Allows for quick creation of a new document.
Saves a document	Ctrl + S	A way to quickly save a document.

Closes the document	Ctrl + W	Allows for efficient closing of a document.
Center the text	Ctrl + E	Used to center a section of text.
Aligns the text to the right	Ctrl + R	Used to align the text to the right margin of the page.
Aligns the text to the left	Ctrl + L	Used to align the text to the left margin of the page.
Decreases the font by 1 pt	Ctrl + [	Once the text is selected is allows for a large section of texts font to be decreased by one point.
Increases the font by one pt	Ctrl +]	Once the text is selected is allows for a large section of texts font to be increased by one point.
Zoom in	Ctrl + plus sign (+)	Used to increase the zoom of a page.
Zoom out	Ctrl + subtraction sign (-)	Used to decrease the zoom of a page.

Module 3: Microsoft Outlook Basics.

What is Microsoft Outlook?

Microsoft outlook is a feature rich email and personal information manager program. This software is primarily used in professional settings across many platforms such as Windows, macOS, mobile devices and in a website form. It allows professionals to have quick access to personal information. This includes personal contacts, calendar scheduling and task tracking. Outlook also has the feature of sending and receiving emails.

Drafting a Professional Global Email:

Objective: To communicate clearly across time zones whilst maintaining a helpful tone.

Steps:

1. *Open the outlook application and click "New email" or once in the application click "Ctrl + shift +M".*

2. *In the "To" field, type the recipient's name and press "Ctrl + K" to verify their email address against the Global Address List.*

3. *The subject line must include a brief sentence containing the reason for the email.*
   Example: Asia-Tokyo Technical inquiry: SharePoint Access.

4. The salutation must contain a professional greeting of “Dear Name” or any greeting which is still considered professional. The closing must also be professional and contain a professional greeting of “Best regards”, followed by your standardized company signature.

Note: do not use regional slang.

5. If the body of an email is over 3 paragraphs, consider scheduling a “Microsoft Teams meeting” instead.

6. Before sending the email with “Ctrl + S”, check the size of the attachment (if one is included) if the size is over 5MB, consider sending the attachment via SharePoint or the company OneDrive.

Note: This guide may be accessed in different languages by clicking “Review” → “Language” and “Translate”.

注意：可以通过点击“审阅”“语言”和“翻译”以不同语言访问本指南。

ملاحظة: يمكن الوصول إلى هذا الدليل بلغات مختلفة بالنقر على “مراجعة” و “ترجمة” “اللغة”.

Remarque : Ce guide peut être consulté dans différentes langues en cliquant sur « Révision » « Langue » et « Traduire ».

Module 4: Technical knowledge - Application 2 support

Figure 14 - Official Microsoft Outlook application icon

4.1) Microsoft Outlook: Troubleshooting

Most Outlook issues are not internal software failures, but rather are related to mailbox overloads, synchronization delays or configuration settings. Use the following to resolve the most common issues:

1. The Offline issue:

Scenario: Emails are not coming through to the inbox. There is a "Offline Status" in the status bar (on the bottom right of the screen).

Figure 15 - Visual representation of the Working Offline Status

Solution:

1. Go to the "Send/Receive" tab on the ribbon and click on "Work Offline" to allow for emails to be received.

2. Outlook is freezing:

Scenario: Outlook is freezing or is very slow to load/open.

Step by step solution:

1. Go to "File" → "Tools" → "Mailbox Cleanup". Click "Empty deleted items" to allow for faster processing and use "Archive" to move old files to a separate storage file.

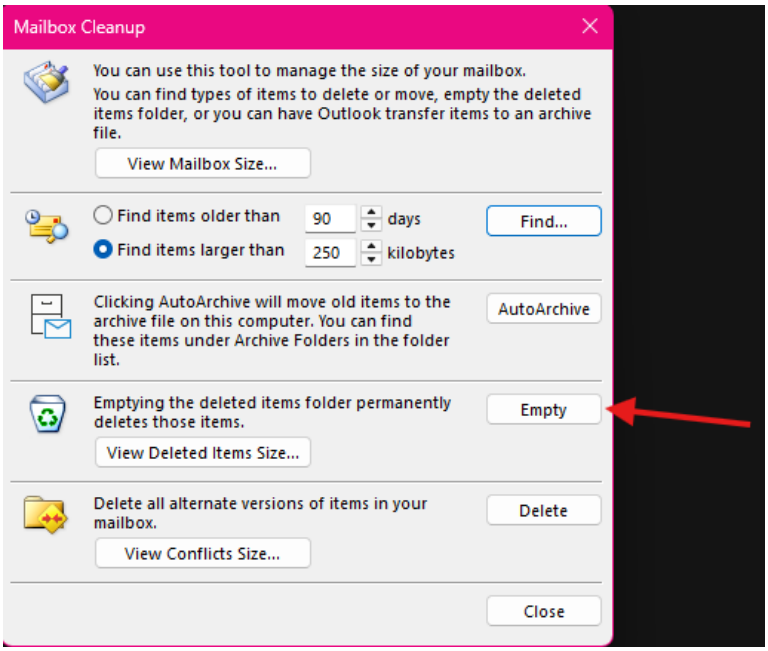

Figure 16 - A Visual representation of the Mailbox Cleanup window with a clear indication of the Empty Deleted Items button

Tip: Disable add-ins for better performance.

1. *Go to "File"→ "Options" → "Add-ins".*
2. *At the bottom where it says "Manage: COM Add - ins" and click on "Go".*
3. *Then uncheck any non-essential tools and restart Outlook.*

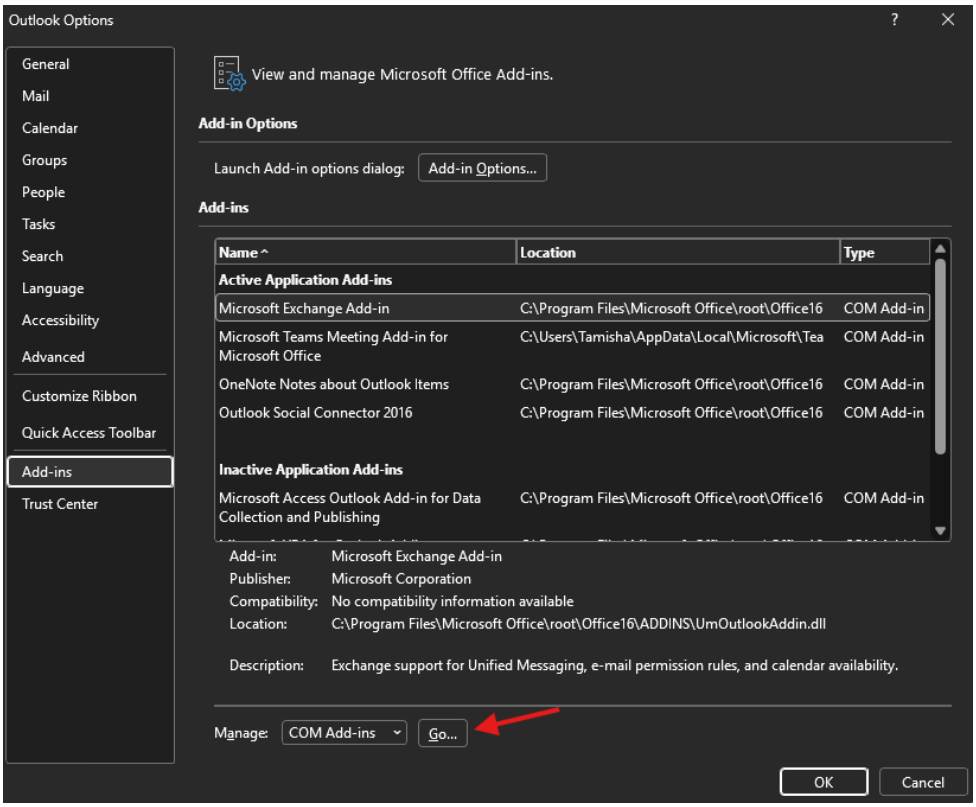

Figure 17 - Visual representation of the Options menu with Add-ins selected. This depicts where the Go button is.

3. Missing Emails:

Scenario: Emails are being sent but it is not being shown in the sent folder.

Solution:

1. Go to “File” → “Option” → “Mail”. Scroll down and under “Save messages”, ensure the box which says “Save copies of messages in sent folder” is checked/on.

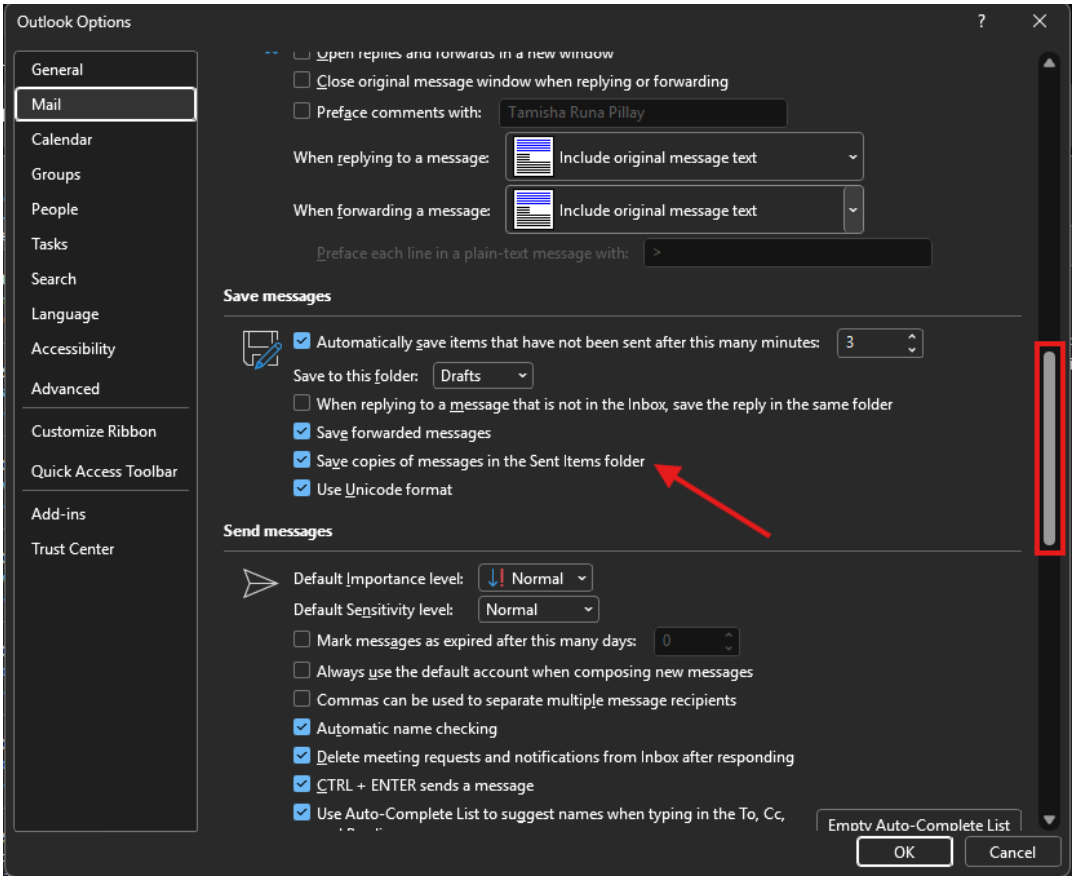

Figure 18 - Visual representation of the Options menu with Mail selected and an indicator of which checkbox needs to be ticked in order for messages to be saved

4. Attachment size limit:

Scenario: A file cannot be uploaded due to Outlook stating “The file is too large” (usually over 20MB – 25MB).

Solution:

1. There is no solution to attaching large files onto emails. Rather share the file to SharePoint or OneDrive, instead of sharing the physical link.

2. Alternatively, compress the file into a ZIP file and then attach that ZIP file to the email.

This is done by going to the file location and clicking the 3 dots and then “Compress to ZIP file”.

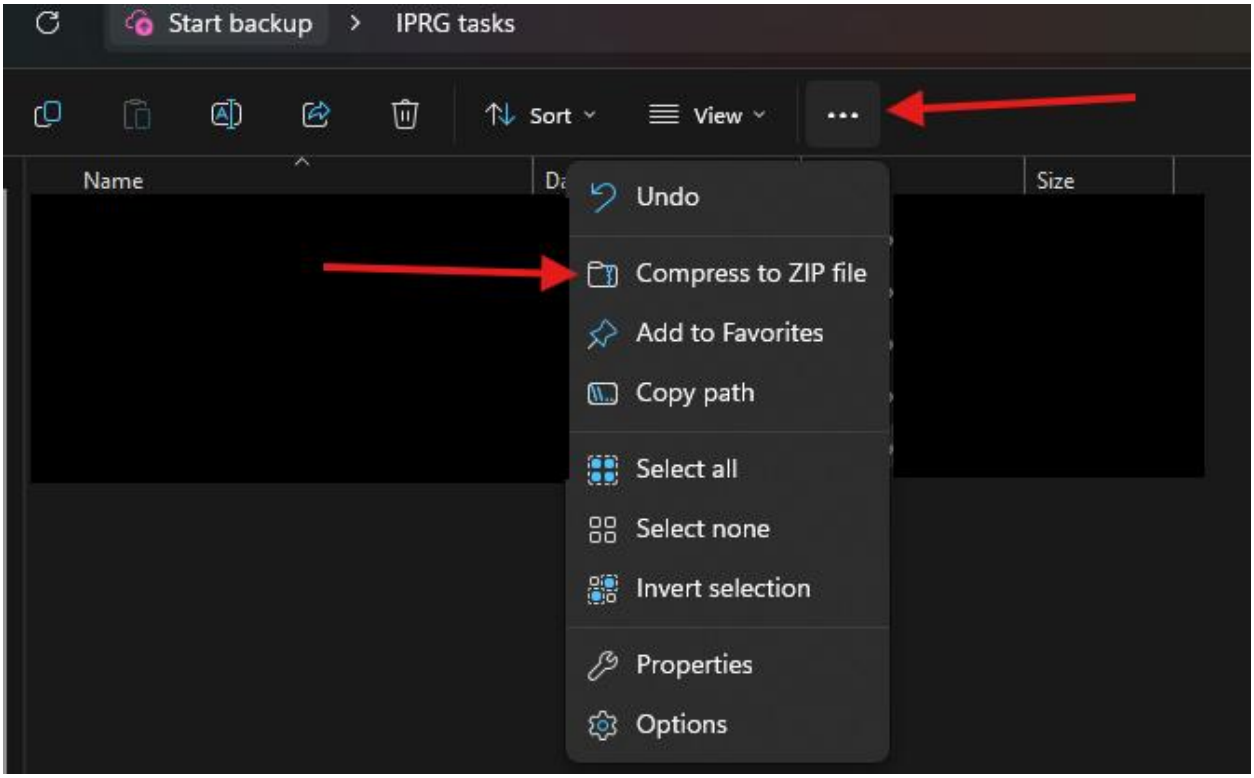

Figure 19 - Visual representation of the window which provides the option of compressing a file into a ZIP file and visual indications of what to click.

5. Emails stuck in Outbox:

Scenario: An email will not send and is stuck in the Outbox folder.

Cause: The attachment is too large or connectivity was lost whilst the email was in progress of being sent.

Solution: Drag the email to "Drafts", fix the attachment issue if necessary…check if the connection to a network is stable, then click "Send" again.

6. Recovering Deleted items:

Scenario: a user accidentally emptied their trash and needs a deleted email back.

Solution:

1. *Go to the "Deleted items folder".*

2. *Click on "Recover deleted items from server/this folder". This allow for recovery of deleted items even after the trash is emptied. (if enabled)*

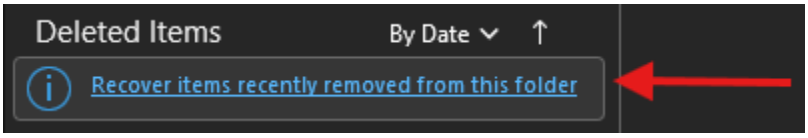

Figure 20 - Visual representation of the Deleted items Folder with the Recover deleted items notification being visible.

7. Outlook won't open:

Scenario: Outlook will not open at all.

Solution:

1. *Hold the "ctrl" key on the keyboard whilst clicking on the Microsoft Outlook application icon.*

2. *It will ask to start in "Safe Mode".*

3. *If it opens, a "Plug-In" or a "Add-in" is causing the crash and needs to be disabled.*

   To disable:
   1. *Click "File" → "Options" → "Add-ins" and disable accordingly.*

8. *Disappearing Navigation Pane:*

   Scenario: The folder list (Inbox, sent, drafts, archive, etc.) on the left has vanished.

   Solution:

   1. Go to "View" → "Folder Pane" → "Normal" .

   2. If the navigation pane was minimized, press the small " > " at the top of the side bar

4.2) Microsoft Outlook: Shortcuts

Note: certain Microsoft Word shortcuts can work on Outlook too.

(refer back to the Microsoft Word: Shortcuts- page 13)

Action:	*Shortcut:*	*Function:*
Switch to mail	Ctrl + 1	Returns to the inbox from any other folder/window.
Switch to Calendar	Ctrl + 2	Returns to the calendar from any other folder/window. Useful for checking dates whilst needed to send a quick email or in a team call.
Switch to contacts	Ctrl + 3	Opens up the contact view for quick message/number access.
Switch to tasks	Ctrl + 4	Opens task view in order to check lists and tasks to be done.
Switch to notes	Ctrl + 5	Opens a new note up, to allow for efficient note taking to happen whilst being in a call
Switch to folder list in the folder pane	Ctrl + 6	Allows for switching between two different folders in a quick manner

Action:	*Shortcut:*	*Function:*
Refresh/send and receive	Ctrl + f9	Used to force Outlook to refresh
New message	Ctrl + Shift + M	Opens a new/black email instantly
Deletes an item	Ctrl + D	Deletes the current email/message.
Mark as read	Ctrl + Q	Clears the “Unread” status and changes it to read
Mark as unread	Ctrl + U	Clears the current status of a message/email and changes the status to “Unread”
Flag for a follow up	Ctrl + shift + G	Flags an email to act as a reminder to follow up/check on a later basis
Send an email	Alt + S	Sends the email current open automatically.
Attach a file/attachment	Alt + N/A/F	Quickly open the insert file menu in an email.
Insert hyperlink (Website link)	Ctrl + k	Places a link for an external source. (website, video, image, etc.)
Save Draft	Ctrl + S	Saves the current open message to Drafts folder

Module 5: Workplace documentation and writing guidelines:

How to log a support request for both Microsoft Word and Outlook:

Every technical interaction must be documented in the central ticketing system. This ensures that if another suite happens to have the same issue, others can refer to your solution.

The internal support desk:

When logging a request, accuracy and clarity is a need. Each log must include:

1. Select the application (Word or Excel) and the specific category which is the inquiry (Formatting, Crashing, etc.).

2. Always include the Office location and the office code (e.g. EUR-BER for Berlin). This helps s track the inquiries and helps us track the specific data of a region.

3. Detail the steps you took.

   Example: “User in Lagos reported Excel ‘Not responding’. Cleared CM Add-ins and restarted in safe mode. Issue has been resolved”.

The Official Microsoft Support (the public knowledge base:

If the issue is a known bug or the internal team cannot find a solution, we consult the “Microsoft Support Website”.

Steps:

1. *Go to https://support.microsoft.com/en-za/contactus or search “Microsoft support”. Enter the specific error code (e.g. Excel Error 0x800402) or search a brief wording of the error you are encountering (e.g. Excel crashing).*

2. *If no forum exists check the “Microsoft Tech Community”. This is where thousands of global experts post solutions to niche errors.*

If the Microsoft site suggests a “Repair” :

Follow these steps if the site recommends a repair for either Word or Excel

Steps:

1. *Open the “Control panel” using the search bar at the bottom of the screen*
   .
2. *Select ”Program and Features”.*

3. *Find “Microsoft 365” and right-click it. Then select “Change”.*

4. *Choose “Quick repair” or “Online Repair”.*
